

# KRISTINA

## A Knowledge-Based Information Agent with Social Competence and Human Interaction Capabilities

### LATEST NEWS ABOUT THE PROJECT

#### Joint seminar of KRISTINA with ARIA-VALUSPA

Our technical partners are glad to take part in the Dagstuhl interactive seminars the 29th of January 2017 and 1st of February 2017. The objective of the Schloss Dagstuhl is to promote basic and application-oriented research in the field of informatics, support advanced, scientific vocational training and to further education in the field of informatics, to promote the transfer of knowledge between research into informatics and application of informatics.

**Use cases** - Migration is increasing in Europe and with it, the problem of the integration of the migrants with language and cultural barriers into the care and sanitary systems in the host countries. Furthermore, the cost explosion in sanitary systems across the member states forces administrations and health insurances to take action and eliminate the two sources of excessive cost generation ... **Blog** - One of the latest articles refers to speech recognition and it has been written by our partner Vocapia Research. Making machines understand human speech has been always a dream, as well as an active quest for researchers since the very beginning of the digital computing era. The first step in this oral communication interaction is transforming the human speech into text.. [\[Read more\]](#)
